THE PORTABLE FLAT SEAT...

...provides stable support for dog riding in the back seat.

MESA, AZ—Do your dogs love traveling in the car? Most animals do but for those who sit in the back seat it can be difficult for them to peer out the window and sometimes they fall between the seats. The Portable Flat Seat is excellent for use in the car when driving with your beloved pet(s) but it also is helpful in many areas. It is a specially designed support platform that is easily installed in the back seat of a car, van or SUV. It provides a way to transport all types of cargo without having to place bags or other items on the floor.

The Portable Flat Seat was invented by Deborah R. of Mesa, AZ. She said, “This is a great way to travel with your pet. It will be appreciated by either canines or felines as it gives a complete ‘floor’ to the back seat on which the animal can move back and forth and still be able to see the scenery move by. It completely closes the gap between the front and back seats and works in virtually any model vehicle. If one must make a quick stop, the pup will not fall down between the seats and is a valuable safety tool when traveling with animals. And those plastic bags of groceries will not tilt and fall underneath the seats either.”
