SANI-PUFF

Sani-Puff makes hand sanitizing convenient!

New York, NY— The invention of the Sani-Puff offers a creative concept for a hand sanitizer dispenser that is operated by an electronic hand sensor. A second version of this product would be designed to emit a spray of sanitizing solution on a toilet seat before and after use. Each dispenser would disperse a light burst of hypoallergenic spray that could be utilized to kill germs and bacteria directly on the hands or the seat of a toilet.

The Sani-Puff was invented by Sandra G. of New York, New York. She said, “My invention is designed to prove an invaluable commodity for any public restroom facility, protecting both patrons and employees. The Sani-Puff would provide a practical way to eradicate germs and bacteria from a variety of surfaces, as well as on the hands.”
