LADDER LOOP

Ladder Loop increases safety and stability...

Glendale, AZ— The invention of the Ladder Loop offers a creative concept for a device that is specially designed for use with a ladder, stabilizing the feet of the ladder and preventing accidental slippage. Easy to use, the Ladder Loop would be used to lock the feet of the ladder into the loop, preventing shifting of the ladder and eliminating the fear of a falling ladder.

The Ladder Loop was invented by Scott G. of Glendale, Arizona. He said, “My invention is designed to increase safety for ladder users, by locking the feet of the ladder into the secure loop, eliminating the possibility that the ladder’s feet can shift and topple the ladder. The Ladder Loop also makes work requiring a ladder much more efficient, as the necessity of having a second person on hand to hold the ladder is no longer necessary.”
