SAFETY SEAT NET

Safety Seat Net is handy and convenient!

Chicago, IL— The invention of The Safety Seat Net offers a creative concept for an adjustable, mesh net to be secured over a car seat. This innovative product would be configured to extend from the headrest to the front of the seat cushion. The Safety Seat Net would provide motorists with a practical means of securing goods stored on their vehicle seats.

The Safety Seat Net was invented by Bryan R. of Chicago, Illinois. He said, “My invention is designed to safely and easily secure loose items that are often placed on the car seat during travel. Practical and affordable, The Safety Seat Net would increase the safety of car travel in a convenient and user friendly way.”
