TUBULAR NET BANDAGE

Tubular Net Bandage with Color and Design

Compton, CA— The invention of the Tubular Net Bandage with Color and Design is a tubular net or mesh-style bandage to be produced in a variety of colors and printed patterns. These bandages would be sold in 100-foot rolls for use in health care settings. The Tubular Net Bandage with Color and Design would provide a bandage that blends with one's clothing, or boasts a festive design.

The Tubular Net Bandage with Color and Design was invented by Tunya S. of Compton, California, who says, "My invention is designed to provide a selection of tubular bandages that can be more personally representative of the wearer. The Tubular Net Bandage with Color and Design would present chemotherapy patients, as well as patients receiving PIC line therapies of other kinds, with a user-friendly bandage that will also lift their spirits. For children, these bandages would be cheerful and encouraging during a difficult time."
