ULTRASONIC BREW TECHNOLOGY

Ultrasonic Brew Technology revolutionizes coffee brewing...

Shorewood, IL— The invention of the Ultrasonic Brew Technology offers a creative concept for a specially designed accessory for coffee makers. This unique accessory utilizes ultrasonic waves to continuously fold or mix the ground coffee with incoming water, enhancing the coffee flavor and increasing the yield.

The Ultrasonic Brew Technology was invented by Mark F. of Shorewood, Illinois. He said, “My invention is designed to not only save money by increasing the yield per measure, but the ultrasonic action would also generate an increase in the flavor spectrum. The Ultrasonic Brew Technology was conceived with household use in mind, however restaurants and coffee houses would also benefit from the cost savings and increased flavor provided by my invention.”
