RAMI SUCTION PEN CONTACT LENS HELPER

RAMI Suction Pen Contact Lens Helper

Los Angeles, CA—The invention of the RAMI Suction Pen Contact Lens Helper offers a creative concept for a handheld suction activated device for applying contact lenses to the eyes. The RAMI Suction Pen Contact Lens Helper would be marketed in a kit that contains a lighted mirror, a contact case, replacement suction tips, and two bottles of contact lens solution.

The RAMI Suction Pen Contact Lens Helper was invented by Selene D. and Hector R. of Los Angeles, California. They state, “Our invention is designed to allow contact lens wearers with a method for applying or removing their contact lenses without touching the eyes or lens with their fingertips. Providing a greater degree of hygiene and ease of use, the RAMI Suction Pen is sure to be appreciated by contact lens wearers who experience difficulty in inserting or removing their lenses, as well as those who look for the most sanitary and hygienic methods for their personal safety.”
