## **SECURITY SCANNER**

Security Scanner designed with safety and convenience in mind...

Brooklyn, NY—The invention of the Security Scanner is set to revolutionize the methods used to access data during vehicle traffic stops. This comprehensive, electronic ID and records information system is designed for use by law enforcement agencies and would make the time needed to gather information during a traffic stop much quicker, and thereby safer for the officer. The Security Scanner is designed to read a specially encrypted barcode on the license plate that would contain the necessary motor vehicle records that would typically be accessed by verbal transmission to a radio dispatcher.

The Security Scanner was invented by Vladimir Tikhonov of Brooklyn, New York who states, “My invention is designed to make traffic stops much more efficient and convenient, both for the officer and the motorist. By immediately accessing pertinent information, the officer can quickly assess the situation, address the issues involved, and complete the traffic stop swiftly and effectively. The Security Scanner would ensure accurate information is secured without delay, increasing the efficiency with which each stop is handled.”

**EDITORS NOTE:** Development of this product is being handled by Invention Resource International. For more information about licensing or sale, contact the Licensing Department at Invention Resource International, 60 E. Rio Salado Parkway, Suite 900, Tempe, AZ 85251.
