PANEL BUDDY

Panel Buddy saves time, improves efficiency...

Metuchen, NJ—The invention of the Panel Buddy offers electricians a real helping hand when working inside the cramped confines of an electrical panel box. Designed as a tool apparatus, the Panel Buddy would be used in conjunction with a drill, allowing the user to quickly prepare wire for placement in electrical devices such as breakers. The power of the drill's reverse motion would quickly straighten the wire in a matter of seconds.

The Panel Buddy was invented by Edmund A. Lepinski of Metuchen, New Jersey, who designed the product with convenience and efficiency in mind. Mr. Lepinski says about his product, "The Panel Buddy would offer a tool that is specifically designed for the very common job of straightening panel wires. Workers would be able to avoid the time consuming task of straightening wires by hand. The Panel Buddy would also be invaluable in ensuring that wires are not stripped, which often occurs when using improper tools."
