CRAB RULER

Crab Ruler offers convenience, ensures accuracy...

Bowie, MD—The invention of the Crab Ruler provides a sure and accurate method for measuring blue crabs, ensuring that any crabs harvested meet regulation sizes. Designed as a water and weatherproof ruler, the Crab Ruler features an innovative flotation device, making it easy to retrieve if it falls or is dropped into the water. The protective polypropylene cover protects the ruler from water damage, as well as damage from the sun. It is designed to withstand the harshest of elements, remaining true in measure and sustaining durability.

The Crab Ruler was invented by William L. Lowe of Bowie, Maryland. He states, “My invention is designed for use by commercial crabbers, as well as those simply enjoying a day of recreational crabbing. A unique feature of the Crab Ruler is the built in measuring device, featuring handy indentations that represent preset measurements for various crab forms. This could include a pre-measured guide noting the proper size for keeping hard crabs, and also one that is pre-measured with the appropriate size for soft shell keepers.”
