## **INTUBATION GLOVE ...**

... guards against injury and exposure to bacteria and disease.

PERTH AMBOY, NJ—The Intubation Glove, a protective glove specially designed by a doctor for use by medical professionals during the intubation process, provides a more effective means of guarding against injury and exposure to bacteria and disease from bodily fluids. Padding on the thumb and middle finger prevent injury to the skin when pressure is applied by the teeth while intubating a patient.

The Intubation Glove was invented by Dr. Javier D. of Perth Amboy, NJ. He said “The Intubation Glove is an innovative product invention that is sure to readily enhance the care and protection of the medical professionals who perform intubation procedures and should be very well received by the entire medical community, a very stable market potential.”
