HANDLE EXTENDER ...

... is a wrench handle extension that provides optimal leverage and comfort.

FLUSHING, NY—The Handle Extender is a universal, adjustable extension handle, designed to slide onto the existing handle(s) of a wide variety of wrenches and— through its adjustable-fit technology — provides increased leverage. The Handle Extender has been designed initially for use with pipe-wrenches, however, the design could be modified to accommodate a variety of manual wrenches such as socket-wrenches, box-head and crescent wrenches.

The Handle Extender was invented by Gaetano T. of Flushing, NY. He said, “This device is perfect for comfortably extending the handle of virtually any wrench. By doing this, the Handle Extender would provide users with increased leverage allowing them to easily deal with overly tight fittings. The Handle Extender would also feature a reliable locking mechanism to ensure that the extension would not fail while in use. Most importantly, however, is that the device is adjustable and would be able to extend a number of sizes to tackle the task at hand. Finally, the Handle Extender would feature a durable yet comfortable grip that would allow the user maximum stability and support during use. ”
