THE NONE BETTER CUTTING/CARVING BOARD ...

... is an all-in-one cutting and carving board.

ISELIN, NJ —The None Better Cutting/Carving Board is a specially designed cutting board featuring a carving station for meats and poultry, a standard cutting board for fruits and vegetables, and a dish rack incorporated into its design. Notably, the cutting board would also serve as a collection receptacle that would efficiently collect juices from meats as they are sliced. The design intent is to provide consumers a space-saving alternative to traditional cutting boards and one which would capture liquids as they are released from foods during preparation.

The None Better Cutting/Carving Board was invented by Emil C. of Iselin, NJ. He said, “This device is the ultimate carving board for any type of food. Since the product would provide consumers with both a carving board for meat and a cutting board for fruits and vegetables, users would no longer have to deal with different cutting boards. Also, since the carving board could be used as a serving dish, users could bring their food to the table and carve the meat there. Normally, juice would go everywhere and there would be a huge mess to clean up; however, since the device would feature a pan that would collect all the excess juice from the food, the cook would have an easy clean up after the meal.”
