TRU GREEN POWER ...

... is a self-powered generator that creates clean, pure power.

MONROEVILLE, NJ—The Tru Geen Power is designed to provide an environmentally friendly, cost-effective form of energy creation for broader consumer and commercial use. It requires only its own motor and battery system for the creation of renewable power, without the need for gasoline, electromagnets, or even sun or wind. Also, it releases no exhaust gases or particulate emissions into the atmosphere, and therefore produces no air pollution. A portable system which will not depend on additional electricity to work, the Tru Green Power will be ideal for use not only in homes and shops, but in remote mountain homes, while camping, or as an emergency back-up, anytime, anywhere.

The Tru Green Power was invented by Frederick S. of Monroeville, NJ. He said, “The idea of a clean, energy-efficient power generator system will certainly promote the goals of cleaner energy, a cleaner planet and atmosphere, and over reliance of fossil fuels and foreign energy sources-goals of tremendous benefit to all consumers.”
