## **CAR LOCATOR**

Car Locator - Directional Arrows & Distance Locator

Inglewood, CA— The invention of the Car Locator is a creative concept that is set to eliminate the frustration of locating your car in parking lots, garages and unfamiliar areas. The Car Locator consists of a transmitting and receiving system. It is designed to provide motorists with a technologically advanced, yet simple means of finding your parked vehicle at such locations as supermarkets, shopping malls, sporting or concert events and airports. The Car Locator is configured to include a transmitter that attaches to the vehicle and communicates with the unit's remote. This will instantly provide the user with the vehicle's location by directional arrows and distance footage.

The Car Locator was invented by Eric M. of Inglewood, California. Quoted saying, "My invention is designed to provide an affordable vehicle location device that could be installed quickly and save users a lot of time in searching for their vehicles. Not only convenient, the Car Locator offers greater safety for travelers and would be particularly beneficial for those returning to their cars after nightfall, especially in unfamiliar areas."
