BREATH A SAVER

Breath A Saver prevents driving while intoxicated...

Amityville, NY— The invention of the Breath A Saver offers a creative concept for a system that would detect the presence of alcohol in the breath of a driver attempting to start a motor vehicle. If the driver's alcohol level exceeds a certain threshold, the Breath A Saver system would disable the vehicle's ignition. The Breath A Saver is designed to be incorporated into the production of new vehicles or retrofitted as an aftermarket accessory for existing vehicles.

The Breath A Saver was invented by Alice T. of Amityville, New York. She said, "My invention has the potential to save countless lives and inestimable destruction, by simply preventing those under the influence from driving. The Breath A Saver would not only be widely accepted by automobile companies and insurance companies, but certainly by the motoring public, as well."
