## **THE WARM WHEEL**

The Warm Wheel designed for comfort and convenience...

The Warm Wheel designed for comfort and convenience

Jackson, NJ— The invention of The Warm Wheel offers an innovative concept for a battery operated steering wheel cover that is configured with an internal heating element. The Warm Wheel is designed to provide motorists with a simple and effective means of keeping the hands warm when driving. A handy temperature control knob would make it possible to regulate the degree of warmth, allowing users to customize the heat output to their comfort level.

The Warm Wheel was invented by Joseph H. of Jackson, New Jersey. He said, “My invention would make driving on cold days much more bearable, as drivers would know the discomfort of a cold steering wheel is eliminated. The Warm Wheel would prove especially beneficial to long distance truck drivers, whose routes often take them through the country’s colder regions.”
