SWIRL BABY HIGH CHAIR

Swirl Baby High Chair provides comfort and convenience!

Costa Mesa, CA— The invention of the Swirl Baby High Chair offers a creative concept for a specially designed high chair boasting a swivel mounted seat. This unique design enables the caregiver to easily adjust the direction the child is facing, making it easier to feed the child or reach a squirming little one's face. The Swirl Baby High Chair would make it possible to feed the child from any direction around seat, making it perfect for use in small kitchens or at crowded dining tables.

The Swirl Baby High Chair was invented by Long T. of Costa Mesa, California. He said, "My invention features a unique rotating platform that will allow the parent to position the child in the desired direction, without having to move or adjust the actual chair. This will make feeding time much more comfortable for the parents or caregiver, as they will not have to stand or stretch awkwardly to reach the child."
