JACK HOOK

Jack Hook designed for convenience

North Barrington, IL— The invention of the Jack Hook offers a creative concept for an adjustable metal hook and mounting base. This mount would lock onto the cargo rack of a truck or car, with the hook used to secure an extension ladder to the rack. The Jack Hook would provide a quick, easy and effective means of securing a ladder for transport.

The Jack Hook was invented by Jacek L. of North Barrington, Illinois. He said, “My invention would be universal in application, equally suitable with virtually any roof-rack system. Once the mounting bases are installed on the rails of the cargo rack, the adjustable Jack Hook would be ready in only moments to secure a ladder, providing total security during transporting, and holding the ladder with far more stability than can be achieved with tie-downs or ropes.”
