## **THE GLOVE WITH SILICONE PADDING ON TOP**

Protects those who suffer from minor bumps/bruises

BALTIMORE, MD— This is a pair of lightweight waterproof, forearm-and-hand gloves, padded with silicone on the back of the hand and upper surface while thinner on the palm and finger portions. The object of this product is to protect persons who are susceptible to bruising and bleeding, particularly those who take anticoagulant medications for heart conditions, from the pain, discomfort, and dangerous bruising and bleeding that so often ensues from relatively minor impacts and bumps. The gel padding offers a therapeutic and protective obstruction for the tops of the hands and upper arms. The gloves come with or without fingers depending upon the needs of the user.

The Glove with Silicone Padding on Top was invented by Iris S. of Baltimore, MD. She said, “The amount of patients who suffer from minor bumps and bruises on the hands and arms are numerous. Sometimes the slightest scratch or bump creates a massive bleeding under the skin and sometimes an open wound. The Glove with Silicone Padding on Top will provide protection for these individuals. They are easy to put on and take off with the zipper closure on the side and they offer complete dexterity to the user.”
