BABY BEE INFANT SOOTHER

Baby Bee Infant Soother designed to calm and soothe...

Sherman Oaks, CA— The invention of the Baby Bee Infant Soother is designed as a vibrating toy covered in a soft fabric and rubber casing, and configured in a whimsical shape. The Baby Bee Infant Soother features a Velcro fastener, making it simple to fasten to the side of a crib, stroller, or car seat, gently calming and soothing an infant through the relaxing, vibrating motion.

The Baby Bee Infant Soother was invented by Jessica S. and Daniel R. of Sherman Oaks, California. They state, “Our invention is designed to emit a gentle vibration and soft humming sound that will soothe and calm an agitated child. The Baby Bee Infant Soother also features specially designed teething wings, perfect for soothing aching gums and adding to the comfort the child receives. Our invention would be ideal for use by parents to soothe a fussy baby, but would be appreciated by professional caregivers and babysitters, as well.”
