THE GOLDEN SNIFFER SAMPLING TOOL

The Golden Sniffer Sampling Tool

Anaheim, CA — The invention of The Golden Sniffer Sampling Tool offers a creative concept for a portable, hand operated dredging device for use in small scale gold prospecting and other dredging or sampling operations. The Golden Sniffer Sampling Tool is designed to provide prospectors, aquarium operators, boaters, marinas, and a variety of industrial operations with a compact, easily used separator dredge. The primary function of the sampling tool utilizes suction to transfer submerged mixtures of sand, gravel and heavier material away from the work site, marina basin, or other body of water.

The Golden Sniffer Sampling Tool was invented by Bradley Y. of Anaheim, California, who has extensive experience working as a suction dredge miner. He said, “My invention is designed to provide extremely powerful suction action in a lightweight, compact, and portable device. The unique design makes it versatile enough to be used in solitary prospecting, recreational boating, and even in large scale commercial operations.”
