## **THE HIDDEN QUICK RELEASE SYSTEM**

The Hidden Quick Release System designed for convenience and style!

Moorestown, NJ— The invention of the Hidden Quick Release System offers a creative concept for a motorcycle design that offers specialized holes in which studs fit for an attachable “sissy bar”. The Hidden Quick Release System is designed to provide a more efficient and attractive means of applying and removing the bar, without leaving behind unsightly, permanent studs, and enhancing the look of the bike.

The Hidden Quick Release System was invented by Howard M. of Moorestown, New Jersey. He said, “My invention is designed to be installed onto most motorcycles by simply changing the fender struts. Simple in concept, yet effective in application, the Hidden Quick Release System would make using a sissy bar extremely easy when it is needed, yet maintain the look of the bike when it is removed.”
